

II. IN THE CLAIMS

Please amend the affected claims as set forth below:

Claim 1 (Previously Presented). In a man-portable, tent-like enclosure having a shape defined by a frame with an enclosure exterior surface connected thereto, and the enclosure exterior surface bearing a first camouflage pattern, the improvement comprising:

a non self-supporting covering removably disposable over said enclosure exterior surface so as to be supported by said enclosure, said covering bearing a second camouflage pattern on a first covering surface, said second camouflage pattern being different from said first camouflage pattern, said covering having a second covering surface opposing said first covering surface, and said covering having a shape closely conforming to the shape of the portable enclosure so as to surround and cover substantially all of said enclosure exterior surface.

Claims 2 (Previously Presented). The invention of claim 1, wherein said covering bears a third camouflage pattern on said second covering surface, said third camouflage pattern being different from said first and second camouflage patterns, and wherein further said covering is reversible so that the second covering surface is selectively visible from the exterior of the portable enclosure.

Claim 3 (Canceled).

Claim 4 (Previously Presented). The invention of claim 1, wherein said enclosure exterior surface comprises a two-sided flexible material removably attached to said frame.

Claim 5 (Canceled).

Claim 6 (Currently Amended). A portable enclosure comprising a collapsible frame characterized in that it tends spontaneously from a collapsed condition to an erected condition thereof, and a flexible, non self-supporting covering substantially surrounding said frame to thereby define a walled enclosure, said flexible covering ~~removably attached to said frame and~~ having an interior surface and an exterior surface, said exterior surface bearing a first visible pattern; and

a further non self-supporting covering removably disposable over said enclosure covering so as to be supported by said enclosure, said removable covering bearing a second visible pattern on ~~a first covering~~ an exterior surface thereof, said second visible pattern being different from said first visible pattern, and said ~~further~~ removable covering having a shape closely conforming to the shape of the portable enclosure so as to surround and cover substantially all of said enclosure.

Claim 7 (Currently Amended). The invention of claim 6, further comprising said interior surface of said flexible covering bearing a ~~second~~ third visible pattern different from said first

and second visible patterns, and said flexible covering being reversibly attachable to said frame
- so that the ~~second~~ third visible pattern on said interior surface is selectively visible from the
exterior of said portable enclosure.

Claim 8 (Canceled).

Claim 9 (Previously Presented). An apparatus, comprising:

A man-portable, tent-like enclosure having a shape defined by a frame with an enclosure
exterior surface connected thereto; and

a flexible covering removably reversibly disposable over said enclosure exterior surface
so as to be supported by said enclosure, said covering bearing a first camouflage pattern on a first
covering surface, said covering having a second covering surface opposing said first covering
surface, said second covering surface bearing a second camouflage pattern thereon which is
different from said first camouflage pattern, and said covering adapted to surround and cover
substantially all of said enclosure exterior surface; and

wherein said enclosure exterior surface bears a third camouflage pattern thereon which is
different from either of the first or second camouflage patterns.

Claim 10 (Canceled).

Claim 11 (Canceled).

Claim 12 (Canceled).

Claim 13 (Previously Presented). The portable enclosure of claim 6, wherein said further covering has a second covering surface opposite said first covering surface, said second covering surface bearing a third visible pattern that is different from either of said first and second visible patterns, and wherein said further covering is reversible so that the second covering surface is selectively visible from the exterior of the portable enclosure.

Claim 14 (Newly Presented). The portable enclosure of claim 6, wherein said first and second visible patterns are different camouflage patterns.

Claim 15 (Newly Presented). The portable enclosure of claim 7, wherein said visible pattern on said interior surface is a camouflage pattern.
